

## Principali informazioni sull'insegnamento

Denominazione dell'insegnamento	<b>Interact with Intelligent Systems</b>	
Corso di studio	Computer Science	
Anno Accademico	2023/24	
Crediti formativi universitari (CFU) / European Credit Transfer and Accumulation System (ECTS)	6 CFU	
Settore Scientifico Disciplinare	INF/01 - Informatica	
Lingua di erogazione	English	
Anno di corso	Second	
Periodo di erogazione	Semester I	
Obbligo di frequenza	No compulsory	
Sito web del corso di studio	<a href="https://www.uniba.it/ricerca/dipartimenti/informatica/didattica/corsi-di-laurea/computer-science/computer-science">https://www.uniba.it/ricerca/dipartimenti/informatica/didattica/corsi-di-laurea/computer-science/computer-science</a>	

## Docente/i

Nome e cognome	Rosa Lanzilotti
Indirizzo mail	<a href="mailto:rosa.lanzilotti@uniba.it">rosa.lanzilotti@uniba.it</a>
Telefono	080-5443287
Sede	Dipartimento di Informatica, Via Orabona 4, 70125, Bari. Stanza n. 672, 6° piano, n.ro 615.
Sede virtuale	Piattaforma ADA - <a href="https://elearning.uniba.it/">https://elearning.uniba.it/</a>
Sito web del docente	<a href="http://ivu.di.uniba.it/people/lanzilotti.htm">ivu.di.uniba.it/people/lanzilotti.htm</a>
Ricevimento (giorni, orari e modalità, es. su appuntamento)	Thursday 13:30 - 14:30 by appointment

## Syllabus

<b>Obiettivi formativi</b>	Artificial Intelligence (AI) will radically change our lives and societies. This shift, which has already started, will probably be the deepest and the fastest humanity has ever experienced. There is general agreement that AI will bring many new opportunities and that most changes should be positive. There is also broad recognition that the development of AI entails many risks that must be handled very carefully. Given this scenario, future AI specialists must become aware of this type of system's potential ethical and practical issues and acquire theoretical competencies and methodological skills to design them properly. To reach this objective, a perspective that considers the users and their needs will be adopted to let them understand and control AI-based technologies.
<b>Prerequisiti</b>	There is no mandatory requirement, but it is better if students know the basic elements of Human-Computer Interaction (HCI)
<b>Contenuti di insegnamento (Programma)</b>	<ol style="list-style-type: none"><li><b>1. Basic concepts of HCI</b><ul style="list-style-type: none"><li>● Interaction design</li><li>● Usability and User eXperience (UX)</li><li>● Human-centred design</li></ul></li><li><b>2. Data gathering techniques</b><ul style="list-style-type: none"><li>● Interviews</li><li>● Questionnaires</li><li>● Focus groups</li><li>● Observation</li></ul></li><li><b>3. Quantitative and qualitative data</b><ul style="list-style-type: none"><li>● Analysis of qualitative and quantitative data</li></ul></li></ol>

	<ul style="list-style-type: none"> <li>• Descriptive statistics</li> <li>• Inferential statistics</li> </ul> <p><b>4. Evaluation studies</b></p> <ul style="list-style-type: none"> <li>• User testing</li> <li>• Field studies</li> <li>• Controlled experiments</li> </ul> <p><b>5. Human-Centred Artificial Intelligence (HCAI)</b></p> <ul style="list-style-type: none"> <li>• HCAI Framework</li> <li>• Design Metaphors</li> <li>• Governance Structure</li> </ul> <p><b>6. Artificial Intelligence vs Intelligence Augmentation</b></p> <ul style="list-style-type: none"> <li>• Augmentation vs automation</li> <li>• Control and Intervention UIs</li> <li>• Design Principles for Intervention User Interfaces</li> <li>• Bias &amp; explanations</li> </ul> <p><b>7. Design of user interfaces for intelligent systems</b></p> <ul style="list-style-type: none"> <li>• Principles, guidelines, heuristics for intelligent systems,</li> <li>• Google's design guidelines,</li> <li>• Microsoft design guidelines</li> </ul> <p><b>8. Evaluation methods for intelligent systems</b></p>		
<b>Testi di riferimento</b>	<ul style="list-style-type: none"> <li>• Shneiderman, B. Human-Centered AI. OUP Oxford, 2022. (textbook)</li> <li>• Russell, Stuart. Human compatible: Artificial intelligence and the problem of control. Penguin, 2019. <ul style="list-style-type: none"> <li>○ Part I</li> </ul> </li> <li>• Preece, J., Rogers, Y., Sharp, H. "Interaction Design, beyond human-computer interaction", John Wiley &amp; Sons, 5th Edition, 2019.</li> <li>• Lazar, J., Feng J.K., Hocheiser, H. Research Methods in Human-Computer Interaction, 2005, Morgan Kaufmann Publisher, 2nd Edition, 2017. <ul style="list-style-type: none"> <li>○ Chapters 2, 3, 4</li> </ul> </li> </ul> <p>Students who wish to do so can borrow the textbooks from the Library. It may be convenient to check their availability through the University Library System at <a href="https://opac.uniba.it/easyweb/w8018/index.php?">https://opac.uniba.it/easyweb/w8018/index.php?</a> and contact the library to arrange the loan.</p>		
<b>Note ai testi di riferimento</b>	On the department's ADA platform (see 'sede virtuale' above), the teacher provides students with the slides used in the classroom and any other teaching materials to support the lectures.		
<b>Organizzazione della didattica</b>			
<b>Ore</b>			
Totali	Didattica frontale	Esercitazione guidate + Progetto	Studio individuale
150 ore	32 ore	15 ore di laboratorio ed esercitazioni guidate	78 ore
<b>CFU/ETCS</b>			
6 CFU	4 CFU	1 CFU	

<b>Metodi didattici</b>	
	<p>Frontal lessons with slides that showcase examples to illustrate the topics covered. Practical exercises on using various principles and techniques presented in class through individual assignments.</p> <p>A project to be carried out, preferably in groups, where students put into practice the concepts presented in class. Non-attending students can work individually by making</p>

	arrangements with the instructor. The Department of Computer Science's e-learning platform is used for the distribution of materials and interactions between teachers and students during and after the course.
--	--

<b>Risultati di apprendimento previsti</b>	
<b>Conoscenza e capacità di comprensione</b>	<p>The main expected learning outcome is knowledge related to:</p> <ul style="list-style-type: none"><li>• principles, paradigms, methodologies, techniques, and technologies fundamental to the design of interaction between intelligent systems and the user</li><li>• quality characteristics that are significant from the user's perspective, particularly usability and User eXperience (UX).</li></ul> <p>Students acquire this knowledge through both frontal lectures and potential participation in specific seminars, as well as through individual exercises and laboratory work. These activities allow them to apply and verify what they have learned, gaining awareness of their understanding and how to improve it.</p>
<b>Conoscenza e capacità di comprensione applicate</b>	<p>To enable students to apply the acquired knowledge, they engage in:</p> <ul style="list-style-type: none"><li>• individual exercises and laboratory work.</li><li>• a case study, in which they must apply some of the techniques presented in class, selecting the most suitable ones for the specific case.</li></ul> <p>The assessment of the in-class exercises and the case study contributes to the final evaluation of the student and, consequently, to the grade obtained in the proficiency exam.</p>
<b>Competenze trasversali</b>	<p><i>Judgment autonomy</i></p> <p>An important objective of the course is for the student to achieve significant judgment autonomy regarding 1) compromise choices concerning the qualities of the software to emphasize in the product to be developed; 2) the management of issues related to the use of design and evaluation techniques for usability and UX during the software development process.</p> <p><i>Communication skills</i></p> <p>Students are encouraged to work in groups and are often invited to present the results of exercises completed independently or in groups to develop their communication skills. For this purpose, students must also develop group case studies, where they apply some of the techniques they have learned, potentially selecting those they consider most appropriate (based on their judgment autonomy). For students attending, the presentation of case studies occurs during the semester; for non-attending students, it is part of the oral exam and allows them to demonstrate their communication skills by explaining the work done, possibly using slides they have prepared, following the teacher's instructions.</p> <p><i>Self-learning ability</i></p> <p>To stimulate the ability to learn independently, students are advised to explore other texts that delve into specific topics in addition to the main textbook.</p>

<b>Valutazione</b>	
<b>Modalità di verifica dell'apprendimento</b>	To assess the student's acquired knowledge, as well as their judgment and communication skills, along with their ability to learn, the case studies and panels conducted during the course will be evaluated based on how they were performed,

	<p>the appropriateness of the techniques used, the originality of solutions, clarity, and synthesis skills evident in the produced documentation (written report and/or slide presentation).</p> <p>Case studies and panels equally contribute to the overall exam assessment; the evaluation also considers the student's active and independent participation in classroom discussions, exercises, and other activities during the course.</p> <p>NOTE: The student who wishes to take their exam in a session must always register on ESSE3 by the deadline, usually three days before the written test date.</p>																
<p>Criteria di valutazione</p>	<p><b>Knowledge and Understanding Skills</b> The student must demonstrate the ability to use appropriate methodologies to design, develop, and evaluate intelligent systems, assess the correct application of the techniques used, and draft clear and comprehensive documentation.</p> <p><b>Applied Knowledge and Understanding Skills</b> The presentation of the case study or discussions during panels is evaluated to verify the student's acquired competencies, synthesis ability, clarity of expression, the capacity to make meaningful comparisons between different methodologies, techniques, and technologies adopted, and to express a critical judgment.</p> <p><b>Judgment Autonomy</b> The student should be capable of applying appropriate solutions to design human-centered intelligent systems. The presentation of the case study is assessed to verify the student's acquired competencies, synthesis ability, clarity of expression, the capacity to make meaningful comparisons between different methodologies, techniques, and technologies adopted, and to express a critical judgment.</p> <p><b>Communication Skills</b> The student should be able to produce clear documentation containing the necessary information for the developed software system.</p> <p><b>Learning Skills</b> The student must demonstrate the ability to deepen concepts through self-learning by studying the material provided by the teacher and the ability to autonomously complete the educational path outlined in the reference text, in addition to the content specified in the teaching program.</p>																
<p>Criteria di misurazione dell'apprendimento e di attribuzione del voto finale</p>	<table border="1"> <thead> <tr> <th>Grade</th> <th>Descriptors</th> </tr> </thead> <tbody> <tr> <td>&lt; 18 insufficient</td> <td>Fragmented and superficial knowledge of the content, errors in applying concepts, deficient description.</td> </tr> <tr> <td>18 - 20</td> <td>Adequate but general knowledge of the content, simple description, and uncertainties in applying theoretical concepts.</td> </tr> <tr> <td>21 - 23</td> <td>Adequate but not in-depth knowledge of the content, ability to apply theoretical concepts, and ability to present the content straightforwardly.</td> </tr> <tr> <td>24 - 25</td> <td>Adequate and extensive knowledge of the content, reasonable ability to apply the knowledge, and the ability to present the content in a structured manner.</td> </tr> <tr> <td>26 - 27</td> <td>Precise and comprehensive knowledge of the content, good ability to apply the knowledge, analytical skills, clear and accurate description.</td> </tr> <tr> <td>28 - 29</td> <td>Extensive, thorough, and comprehensive knowledge of the content, adept application of the knowledge, strong analytical and synthesis skills, confident and accurate description.</td> </tr> <tr> <td>30 30 e lode</td> <td>Pervasive, thorough, and comprehensive knowledge of the content, well-consolidated ability to apply the knowledge, excellent analytical, synthesis, and interdisciplinary linking skills, and mastery of description.</td> </tr> </tbody> </table>	Grade	Descriptors	< 18 insufficient	Fragmented and superficial knowledge of the content, errors in applying concepts, deficient description.	18 - 20	Adequate but general knowledge of the content, simple description, and uncertainties in applying theoretical concepts.	21 - 23	Adequate but not in-depth knowledge of the content, ability to apply theoretical concepts, and ability to present the content straightforwardly.	24 - 25	Adequate and extensive knowledge of the content, reasonable ability to apply the knowledge, and the ability to present the content in a structured manner.	26 - 27	Precise and comprehensive knowledge of the content, good ability to apply the knowledge, analytical skills, clear and accurate description.	28 - 29	Extensive, thorough, and comprehensive knowledge of the content, adept application of the knowledge, strong analytical and synthesis skills, confident and accurate description.	30 30 e lode	Pervasive, thorough, and comprehensive knowledge of the content, well-consolidated ability to apply the knowledge, excellent analytical, synthesis, and interdisciplinary linking skills, and mastery of description.
Grade	Descriptors																
< 18 insufficient	Fragmented and superficial knowledge of the content, errors in applying concepts, deficient description.																
18 - 20	Adequate but general knowledge of the content, simple description, and uncertainties in applying theoretical concepts.																
21 - 23	Adequate but not in-depth knowledge of the content, ability to apply theoretical concepts, and ability to present the content straightforwardly.																
24 - 25	Adequate and extensive knowledge of the content, reasonable ability to apply the knowledge, and the ability to present the content in a structured manner.																
26 - 27	Precise and comprehensive knowledge of the content, good ability to apply the knowledge, analytical skills, clear and accurate description.																
28 - 29	Extensive, thorough, and comprehensive knowledge of the content, adept application of the knowledge, strong analytical and synthesis skills, confident and accurate description.																
30 30 e lode	Pervasive, thorough, and comprehensive knowledge of the content, well-consolidated ability to apply the knowledge, excellent analytical, synthesis, and interdisciplinary linking skills, and mastery of description.																

## Altro

Students are advised to rely exclusively on information/communications provided on the official websites of the Department of Computer Science or on social groups only if they are established and administered solely by the instructors of the respective courses:

- <https://www.uniba.it/it/ricerca/dipartimenti/informatica/didattica/corsi-di-laurea/corsi-di-laurea>
- <https://www.uniba.it/it/ricerca/dipartimenti/informatica>
- <https://elearning.di.uniba.it/>

Course programs are available here:

- <https://programmi.di.uniba.it/>

The information that all students should be aware of is outlined in the Didactic Regulations and Study Plans, available on the website:

- <https://www.uniba.it/it/ricerca/dipartimenti/informatica/didattica/corsi-di-laurea/corsi-di-laurea>

Students are advised to be cautious about information and materials circulated on unofficial websites or social groups, as they often prove unreliable, incorrect, or incomplete. For any doubts, students should request a meeting with the instructor following the specified office hours.
